The Solution for Improved Flowering and Fruiting of Plants

Huma® Breakout®, carbon-complexed with Micro Carbon Technology®, is designed to feed the natural metabolic process within the plant for enhanced bud initiation, flowering, and fruit set. When applied to soils, Breakout® is effective at providing needed nutrients for fibrous root growth and enhanced root mass development.

Benefits of Use:

- Provides energy needed to push “bud-break” uniformly
- Accelerates the emergence of fruiting buds
- Provides energy needed to promote uniform flowering, increasing the number of flowers and improving fruit set
- Can be used to acidify/buffer spray solutions (pH 2.0)
- May be applied with other foliar nutrients for maximum effect on flowering and fruit set
- Can be used at seeding or when transplanting to maximize new root growth

Deficiency Symptoms—When to Apply:

- Non-uniform bud emergence of crops
- Light fruit set
- Slow emergence of fruiting buds
- Leaf-burn or phytotoxicity

Application Instructions:

SHAKE WELL BEFORE USING. Can be applied in combination with compatible plant growth regulators, pesticides, or other liquid fertilizers. If compatibility is in question, jar test a small quantity. Do not foliarly apply this product in concentrations greater than 10% without a preliminary foliar test.
