OM 2-6 mm

CARBON-RICH ORGANIC ACIDS

GUARANTEED ANALYSIS:

Contains beneficial substances:
Total Humic Acids (HA)..... **40.0%**
(Analysis using the HPTA or ISO 19822 Method)

Other Test Methods:
Total Humic Acids (HA).....**35.0%**
(Analysis using the CDFA Method)

Total Humic Acid (HA) &
Fulvic Acid (FA).....**70.0%**
(Analysis using the Colorimetric Test Method)

Derived From: leonardite; less than 3% dust and 18% moisture.

PHYSICAL PROPERTIES:
Form: Dry granule
Appearance: Dark reddish-brown-to-black particles/dust having no odor.
Density: 45–48 lb/ft^3
Net Weight: 50 lb / 22.68 kg

CAUTION:
Keep out of reach of children. Harmful if swallowed. Ingestion of this product may cause gastrointestinal irritation or pain. Inhalation of dust may cause respiratory irritation.

STORAGE & DISPOSAL:
Keep product in original bag. Do not transfer into food or drink containers. Always dispose of bag in accordance with local, state, and/or federal regulations.

CONDITIONS OF SALE:
The information contained in this bulletin is believed to be accurate and reliable. Buyer and user acknowledge and assume all liability resulting from the use of this material. Follow directions carefully. Timing, method of application, weather, plant and soil conditions, and other factors are beyond the control of the seller.

OMRI LISTED For Organic Use

©2026 Huma HA-072326

The Natural Way to Build Fertile, Productive Soils

OM 2–6 mm is a natural humic substances product processed from naturally occurring, oxidized humic lignite. It provides a concentrated source of humic substances and is a supplemental source of trace elements. Humic substances add organic matter to soils—which stimulates soil microbial life and soil fertility, enhances plant nutrient availability and uptake, improves root development and root mass and growth, and increases crop quality and yield.

OMRI-Listed® OM 2–6 mm is ground and screened to a uniform crumble (contains less than 3% dust) ideal for mixing with other dry inputs that are not hygroscopic. It can be applied to all soils—broadcast in fall, post-harvest, or early spring—either pre-plant or with seed. Incorporation is not required. It can be applied in bands, either with seed, fertilizer, or after planting.

BENEFITS OF USE:

- Uniform granular size promotes even coverage/distribution of humic substances for sustainable carbon benefit
- Long-term soil organic-matter building
- Increased water penetration
- Increased flocculation of clays
- Promotes conversion of fertilizer into plant-available food
- Increases soil nutrient mineralization
- Sustainable soil microbial activation

METHOD OF APPLICATION	SUGGESTED RATES		
	Field Crops, Sod, and Specialty Crops		Tree or Vine Crops
Soil banded or side dressed	Up to 75 lb/ac, 75 kg/ha	7 lb/1,000 ft^2, 3 kg/100 m^2	Up to 150 lb/ac, 150 kg/ha
Soil broadcast incorporated	Up to 150 lb/ac, 150 kg/ha	14 lb/1,000 ft^2, 6.0 kg/100 m^2	Up to 300 lb/ac, 300 kg/ha

APPLICATION INSTRUCTIONS:

Designed to be applied to the soil. Best results will be obtained when applied directly to the soil followed by shallow incorporation or irrigation. Apply by broadcast, whether through air or ground machine. Can be applied to all soil types for agricultural fields, ornamentals, lawns, gardens, and landscapes. Avoid spreading during high humidity. Soil moisture is required for maximum bioactivity: if soil is dry, moisture should be provided by irrigation. Applications can be made as often as every 30 days, as needed.
